# Tobyworld Hot-Wallet Breach — Incident Report

Oct 29, 2026 · @Ernie

## Summary

On 29 Oct 2026, between 13:59:59 and 14:03:13 UTC, four Tobyworld hot wallets on Base were emptied into one wallet, R ( `0x67c2…04f7` ). R sold everything within 41 minutes for about 108.07 ETH (≈ $252k).

- **Taken:** 42.0T TOBY (10 % of supply, the Genesis allocation in `sc` ), 57,083 PATIENCE from `u29` and `pD` , and 1.773 cbBTC of twpot sale proceeds from `e4` .
- **Market damage:** TOBY and PATIENCE both fell 95.5 % at the low. At 20:11 UTC TOBY was still down 54 % and PATIENCE 69 %.
- **Where it went:** 70 ETH was bridged to Ethereum. About 40 ETH of it is already in Tornado Cash. Another 30 ETH sits unmixed in a laundering wallet, and 43.8 ETH is still in R on Base (as of 20:11 UTC).
- **Who:** R was created on 6 Oct from the payout wallet ( `0x401d…07fd` ) of a drainer network that has emptied hundreds of unrelated wallets on six chains. toadgod confirmed the hack on X on 29 Oct.
- **How:** each transfer was signed directly with that wallet's own private key, and all four came from one wallet app. The keys were most likely exposed together, from one place.

**Do first:**

1. Stop twpot sales paying `e4` . Every new purchase sends cbBTC to a wallet the attacker controls.
2. Find where the four keys were stored. Move funds out of every other wallet kept in the same place, starting with the LP owner `x7` and the PATIENCE treasuries.
3. Report R and the trail addresses to SEAL 911, the bridges and the exchanges while about 74 ETH is still unmixed.

## Timeline

The four wallets were emptied in 3 minutes 14 seconds. Within 4 hours the proceeds were sold, bridged to Ethereum and partly mixed. All times are UTC.

| Time (UTC) | What happened | Tx |
|---|---|---|
| 6 Oct 21:33 | R is created. Drainer payout wallet `0x401d…07fd` moves its whole stash into it: about 36 tokens, including 487.9M TOBY, plus gas. | 0x3490…25cb |
| 7 Oct 18:31 | An exchange-style withdrawal wallet ( `0x9637…ef9a` ) pays R's Ethereum address 0.1384 ETH. | 0xd9d7…3ae6 |
| 29 Oct 13:59:59 | `e4` sends 1.77308915 cbBTC to R. | 0x4dc9…5004 |
| 14:01:25 | `sc` sends 42,000,899,999,999.81 TOBY to R. | 0x6a51…3951 |
| 14:02:07 | `u29` sends 13,933.62 PATIENCE to R. | 0x4893…2f65 |
| 14:03:13 | `pD` sends 43,149.59 PATIENCE to R. | 0x2b00…b87c |
| 14:12:53 | R receives 0.098 ETH of gas from a gas service ( `0x18be…63dd` ). | — |
| 14:20:43 | R sells the cbBTC for 61.086 ETH. | 0xbb30…6551 |
| 14:23:27 | R's 42.0T TOBY is filled through a UniswapX order for 28.814 ETH. | 0x05ba…ef37 |
| 14:40:31 | R sells 56,512 PATIENCE for 18.173 ETH. | 0xbd31…fe56 |
| 14:51–14:52 | R adds 0.764 ETH through deBridge (ordered from its own Ethereum address) and 4.848 ETH from a custody wallet ( `0xa189…3501` ). | — |
| 15:07:07 | R sends 10.0 ETH to a fresh hop wallet ( `0xc84d…0c76` ). | 0x7189…2b89 |
| 16:05:23 | The hop bridges 9.99 ETH to Ethereum through Relay and passes it to `0x47a8…4c4b` . | 0x7466…ece6 |
| 16:28–17:42 | `0x47a8` deposits 9.9 ETH into Tornado Cash in 18 deposits. | — |
| 16:59:11 | R sends 30.0 ETH to bridge wallet `0x82c1…b8f8` . | 0xcd78…2642 |
| 17:07 | `0x82c1` bridges it through Stargate. 29.992 ETH lands in `0xd137…eeff` on Ethereum at 17:10:59. | 0xc17a…1d32 |
| 17:44–17:51 | `0xd137` deposits 187.6 ETH into Tornado Cash (18 × 10, 7 × 1, 6 × 0.1 ETH), the first 30 ETH included. | — |

| Time (UTC) | What happened | Tx |
|---|---|---|
| 17:51:53 | R sends a second 30.0 ETH to `0x82c1`. | 0x6d50…0cfb |
| 17:54:39 | `0x82c1` bridges it through Stargate. 29.997 ETH lands in `0xd137` at 17:55:59. | 0xf348…fa59 |
| 18:13–18:16 | `0xd137` approves USDT and swaps into 55.3 ETH. | — |
| 20:11 | Snapshot: R holds 43.78 ETH on Base. `0xd137` holds 85.41 ETH on Ethereum. | — |

toadgod confirmed the breach on X later on 29 Oct (post).

## What was taken

Four Base wallets were each emptied of their main token in single transfers to R. Their small ETH gas balances were left behind.

| Wallet | Role in the estate | Taken | Signed (UTC) |
|---|---|---|---|
| `e4` `0xe4a4…f79f` | twpot sale proceeds: buyers pay cbBTC here inside each purchase | 1.77308915 cbBTC | 13:59:59 |
| `sc` `0xdaaf…5d1a` | Genesis wallet: the 10 % TOBY allocation meant to seed the TOBY/SPCXc market | 42,000,899,999,999.81 TOBY | 14:01:25 |
| `u29` `0x2956…3d56` | payout wallet funded by `pD`, run by a batch payout bot in August | 13,933.62 PATIENCE | 14:02:07 |
| `pD` `0xc7d5…9001` | PATIENCE treasury funded by the courier wallet `0x2f88…c9ea` | 43,149.59 PATIENCE | 14:03:13 |

R received 56,512.38 PATIENCE; the token's 1 % transfer tax sent the other 570.83 to the pond.

Untouched at 20:11 UTC: the deployer `tg`, deployers `d1` and `d2`, the Gov Safe and the T1 treasury Safe, the LP owner `x7`, the treasury wallets `cr`, `fs`, `dv` and `vest`, the airdrop wallet `a70`, the harvest keeper and both harvesters. `sc` still has a 7.7T TOBY allowance to the market contract, which does nothing while `sc` holds no TOBY.

## How it was sold

R turned everything into ETH within 41 minutes of the first sweep, for 108.07 ETH (≈ $252k at the sale-time ETH price of $2,328.78).

| Sale (UTC) | Sold | Route | ETH received |
|---|---|---|---|
| 14:20:43 | 1.77308915 cbBTC | approval to LI.FI, then a Uniswap router into a V3 pool | 61.086 |
| 14:23:27 | 42,001,387,917,248 TOBY (the 42.0T from `sc` plus 487.9M from the drainer's stash) | UniswapX order; the filler split it between the TOBY V2 pair and a V3 pool | 28.814 |
| 14:40:31 | 56,512.38 PATIENCE | Permit2, then a Uniswap router into the PATIENCE/WETH pair | 18.173 |
| **Total** | | | **108.073** |

Price on the Base pools, in ETH:

| Token | Before (13:59) | Low, right after the sale | 16:38 | 20:11 |
|---|---|---|---|---|
| TOBY, ETH per 1B TOBY | 0.003259 | 0.000148 (−95.5 %) | 0.001098 (−66.5 %) | 0.001487 (−54.4 %) |
| PATIENCE, ETH per token | 0.0015417 | 0.0000688 (−95.5 %) | 0.000434 (−71.9 %) | 0.000471 (−69.4 %) |

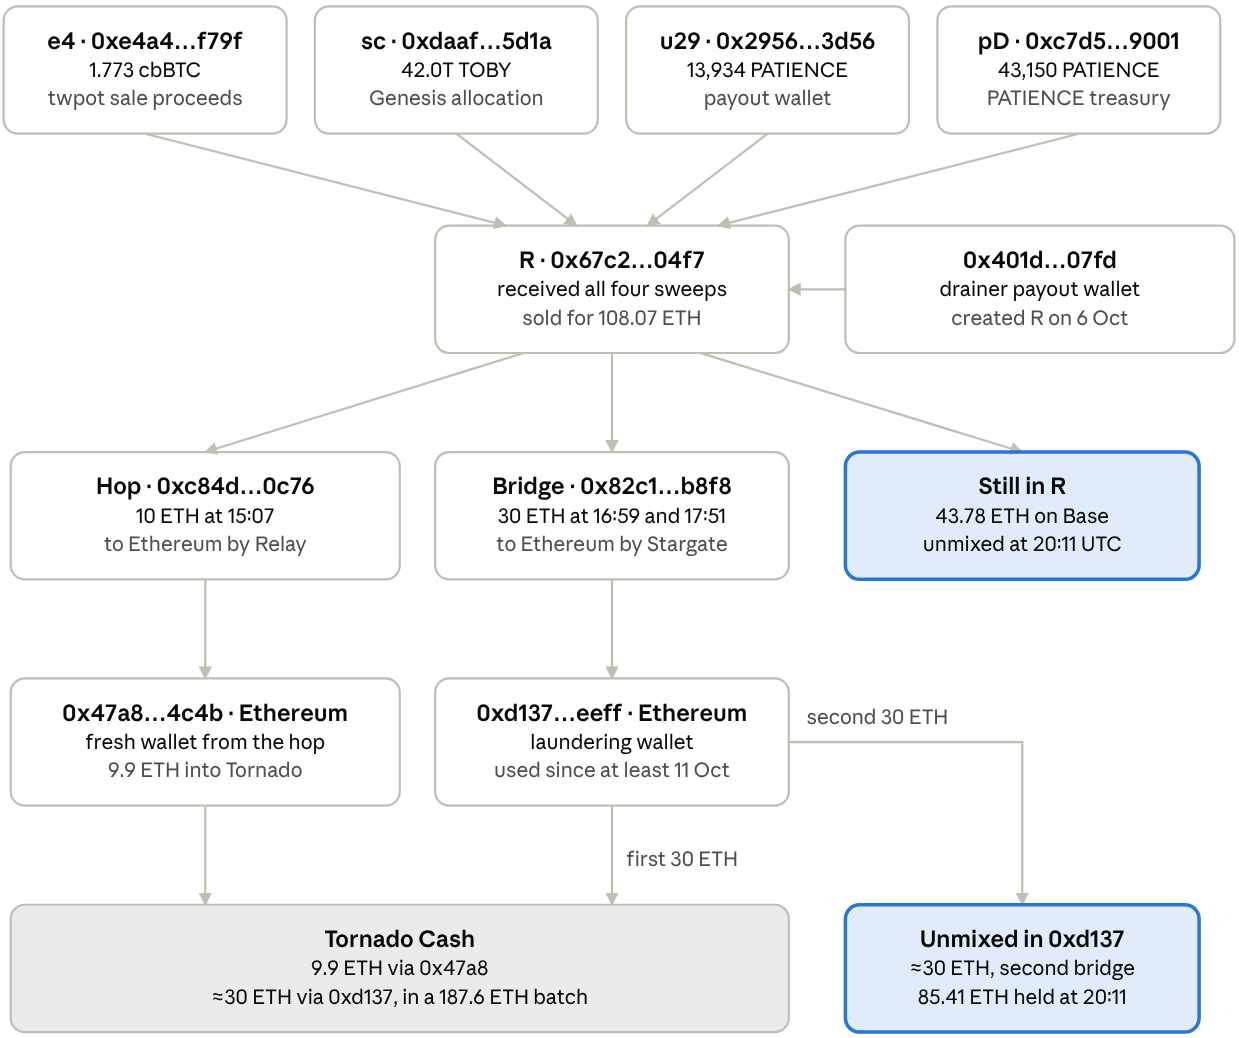

In dollars, PATIENCE went from about $3.59 to $1.09. The sales also took WETH out of both pools: the PATIENCE pair holds 12.82 WETH (23.04 before) and the TOBY V2 pair 22.89 WETH (about 33.6 before). The harvester's next 10-PATIENCE pull will earn T1 about 69 % less WETH than before.

## Where the money went

About 40 ETH of the proceeds was in Tornado Cash by 17:51 UTC. About 74 ETH was still unmixed at 20:11 UTC, most of it in R on Base.

**About 74 ETH of the proceeds was still unmixed at 20:11 UTC**

Fund trail from the four swept wallets, 29 Oct 2026, UTC

fund trail · Base to Ethereum, 29 Oct 2026

R kept 43.78 ETH and sent 70 ETH on in three transfers; both Ethereum wallets fed Tornado Cash within the hour. The amounts add up to about 113.7 ETH because R also took in 5.71 ETH from the attacker's own sources (gas, deBridge and the custody wallet).

## Who is behind R

R belongs to a large drainer operation working across six chains, whose payout wallet is `0x401d…07fd`. It uses EIP-7702, which lets a wallet run a contract's code: hijacked wallets are pointed at a sweeper contract that forwards their tokens to the payout wallet.

- **R was seeded by it.** R′s very first funds, on 6 Oct, came entirely from `0x401d…07fd`: about 36 tokens plus gas, in four blocks. R had never been used before.
- **It is hard-coded in the sweepers.** `0x401d…07fd` is written into sweeper contracts `0x61d4…6e16` on Base (deployed 26 Jun 2026) and `0x2c6f…571d` and `0x005c…020d` on Ethereum.
- **Scale:** 28,183 transactions on Ethereum and 6,110 on Optimism, and active on Base, Arbitrum, Polygon and BSC. At least 177 wallets have sent it tokens on Ethereum and at least 118 on Optimism.
- **Hijacked wallets:** 47 of 60 sampled Ethereum senders had been pointed at one of these sweeper contracts.
- **Unrelated victims, not one person's wallets.** They were first active anywhere from 2017 to 2026, made 3 to 2,619 transactions each, and held very different tokens. Some had been dormant for years before being emptied, which points to leaked keys rather than phishing alone.
- **Tobyworld holders among them.** In the Base history searched, 11 TOBY transfers into `0x401d…07fd` were exactly 295,774,647 TOBY, the 2024 airdrop amount.
- **Still running.** It kept collecting on 18–24 Oct, after R was created, so R is a second wallet of an active operation.

The other senders to R are services (a gas service, Uniswap, deBridge, a custody wallet) plus four look-alike addresses. Those copy the first and last characters of the hop and bridge wallets: an address-poisoning crew is now targeting R itself.

## How the keys were likely exposed

The four keys were most likely exposed together, from one place where all four were stored. That is an inference from how the transfers were signed; nothing on chain shows the place itself.

- **Signed directly by each key.** None of the four wallets carries delegation code. These were ordinary transfers signed with each wallet's own private key, not 7702 sweeps.
- **One wallet app signed all four, in 3 minutes 14 seconds.** All four use the same fee rule (max fee minus tip equals exactly 1.43 × the base fee), live tips of 0.0022–0.0024 gwei, and gas limits padded 1.63–1.74×.
- **No setup was needed.** Nobody topped up their gas in the 24 hours before; each paid with ETH it already held. None of the four has ever been used on another chain.

- **u29's key existed outside its bot.** u29's normal August payouts came from a batch bot with completely different settings (zero tip, 2.69M gas). The sweep did not come from that bot, so the key was also held somewhere else.
- **No earlier contact.** In the TOBY and PATIENCE history searched (about 40 % of Base blocks since 24 Jun), no estate wallet traded with the drainer network before 29 Oct.

**A precaution about the governance signer.** The same 1.43 fee rule appears in the team's own transactions. Gov Safe signer `0xb032…036e` used it in all four pond pause and unpause transactions (6–11 Oct), and `pD` used it on 8 Aug. About 1 in 24 ordinary Base users (7 of 165 sampled) sign with this rule, so it may be coincidence. The attacker's own bridge wallet `0x82c1…b8f8` also signs this way, which makes coincidence more likely. But if the hot keys and `0xb032` lived in the same wallet app or on the same device, treat `0xb032` as exposed too.

R itself signs with different software (a 0.0001 gwei tip and exactly 21,000 gas), so the attacker runs at least two setups.

## Recommended actions

The most urgent step is to cut off the wallets the attacker still controls, then secure every key that was stored with them.

### Secure now

1. **Stop twpot payments to `e4`.** Change the sale contract's payment recipient or pause sales. The attacker holds `e4`'s key, and every new purchase sends it cbBTC.
2. **Treat `e4`, `sc`, `u29` and `pD` as burned.** Never send anything to them again, and remove them from any contract role, allowlist or recipient setting.
3. **Find where the four keys were stored.** Treat every key kept in the same place (wallet app, device, password manager, server, `.env` file or backup) as exposed. Move funds to new keys made on a clean device, highest value first:
   - `x7` `0x7dad…dda0`, which owns 99.75 % of the PATIENCE/WETH LP
   - `tg`, which holds 8.80 ETH on Base
   - the treasury wallets `cr`, `fs` and `dv`, and the airdrop wallet `a70`
   - the harvest keeper and any other bot keys

4. **Swap out the governance signer if it shared that place.** The Gov Safe is 2-of-3 ( `d1` , `0xb032…036e` , `0x870c…098a` ), so the other two owners can replace `0xb032` . Check the Safe's pending queue first.
5. **Check every team wallet for a 7702 delegation.** Code starting `0xef0100` means it has been pointed at a contract. None of the four swept wallets had one, but it is this drainer's usual tool.

### Report and trace

6. **Open a SEAL 911 ticket** through the Telegram bot @seal_911_bot or sos@securityalliance.org (SEAL). SEAL never asks for keys, seed phrases or payment.
7. **Report the appendix addresses** to Relay, deBridge, LayerZero/Stargate, THORChain front ends and the main exchanges, and to law enforcement (for example the FBI's IC3 in the US). R's 43.78 ETH on Base and about 30 ETH in `0xd137` were still unmixed at 20:11 UTC.
8. **Exchange lead.** `0x9637…ef9a` paid R's Ethereum address 0.13841302 ETH on 7 Oct (0xd9d7…3ae6). The same withdrawal wallet paid toadgod's Ethereum wallet `0xbcad…0c0c` 2.86 ETH on 16 Mar 2024 (0x50cf…594f), so the team may know which exchange or swap service runs it. That service can identify who withdrew to R.
9. **Custody lead.** `0xa189…3501` sent R 4.847917 ETH at about 14:52 UTC on 29 Oct through `withdrawETH` , the shape of an exchange or custody withdrawal. Its operator may hold account records.
10. **Bridge records.** Relay request `0x1793…6141` and the two Stargate transfers (appendix) carry order IDs those teams can look up.

### Tell the community

11. Name the compromised wallets and say the dump was the attacker's, not the team's.
12. Warn holders not to buy twpot until `e4` is replaced, to check full addresses before sending (look-alike addresses are active around this incident), and to ignore anyone offering "fund recovery".

## Open questions and limits

- **Where the keys leaked from.** The chain shows the keys being used, not how they got out. Only the team can check where they were kept.

- **THORChain exits.** `0xd137` has interacted with the THORChain router 17 times. THORChain explorers such as viewblock.io or runescan.io show where each swap paid out, possibly to Bitcoin addresses. Not traced here.
- **Who runs `0x9637` and `0xa189`.** Both look like exchange or custody payout wallets; neither has a public label.
- **Who deployed the Base sweeper.** `0x61d4…6e16` was created through another contract on 26 Jun, so finding its deployer needs a transaction-trace service.
- **Search coverage.** Base explorers limit automated access. The Base token search reached about 40 % of blocks, so "no earlier contact" is likely but not certain.
- **Tornado Cash.** Deposits break the on-chain link, and withdrawals cannot be matched to deposits from public data.
- **An unexplained top-up.** On 25 Oct at 08:36 UTC, `0xc5ae…cbe2`, a long-time Base user, sent `sc` exactly 58,097,041 TOBY, rounding its balance. No link to R or the drainer was found.

## Appendix: addresses and transactions

Full addresses and hashes for reports to SEAL, bridges, exchanges and investigators. Each links to its block explorer.

### Addresses

| Label | Address | Chain | Role |
|---|---|---|---|
| `e4` | 0xe4a4d0235cdb57b8e7a74f2a9d1b4bce6941f79f | Base | Compromised: twpot sale proceeds |
| `sc` | 0xdaaf02e6a550d1060f5e610136407f31dc565d1a | Base | Compromised: Genesis TOBY wallet |
| `u29` | 0x2956e79667206de59238456dd48d019e8d433d56 | Base | Compromised: payout wallet |
| `pD` | 0xc7d50ca21e527cf5970a80a6202ac54add9e9001 | Base | Compromised: PATIENCE treasury |
| R | 0x67c29a3f4d0b9609a18c35779430efc0094604f7 | Base, Ethereum | Attacker: received and sold the sweeps |
| Hop | 0xc84d6dbfbdee7ae2da87de974614752d81d80c76 | Base, Ethereum | Attacker: 10 ETH, bridged by Relay |

| Label | Address | Chain | Role |
|---|---|---|---|
| `0x47a8` | 0x47a8736452475f9e82098c6364010175c0595c4b | Ethereum | Attacker: 9.9 ETH into Tornado Cash |
| Bridge wallet | 0x82c15d53798879f53a06896d215157c13262b8f8 | Base | Attacker: 2 × 30 ETH, bridged by Stargate |
| `0xd137` | 0xd13772ef959a4b227c3e9e62a4c971ce8886eeff | Ethereum | Attacker: laundering wallet, 187.6 ETH into Tornado on 29 Oct |
| Drainer payout | 0x401dacb7697a9c8dfbefc5fcc0102ca29aa007fd | Six chains | Attacker: seeded R; payout of the sweepers |
| Base sweeper | 0x61d4db8a98045df3456408762cd2403666976e16 | Base | 7702 sweeper contract |
